## **B777 Nose Wheel Bay Access Platform**

The Semmco B777 nose wheel bay access platform has been designed for safe working throughout the wheel bay with extreme ease of manoeuvrability.

The lightweight, modular aluminium platform and stair structure which provides safe access whilst working within the B777 nose wheel bay, has a profiled, fold away front section. When fitted around the nose wheel leg/strut, this provides a snug fit as a result of the incorporated padded protection.

The folding section provides reduced length and compactness when towing, whilst the folding section is easily operated with a hinged section and gas strut assistance.

The manoeuvrability allows the unit to be easily towed whilst the front lightweight steering system allows the unit to be effortlessly positioned on the aircraft centre line and to facilitate any final adjustment, the rear axle incorporates a simple to operate jockey wheel. All features have been designed to allow users ease of use and safe positioning of the platform with no potential aircraft damage.

The working platform incorporates a rear fold down flap section allowing extended use to the front section of the nose wheel bay and easy access to the oxygen charging compartment.

The B777 nose wheel bay access platform extends the already well established range of safe, lightweight easily manoeuvrable aircraft access platforms which Semmco provide for line and hangar use.
