

Goldsworth Park Trading Estate, Unit 14

Semmco investment due to high demand

Innovative British engineering company, Semmco, is expanding its design and manufacturing facility at Goldsworth Park Trading Estate, Woking into a second unit, to enhance its capabilities and product offering for its global network of aviation and rail clients.

Semmco is a design and engineering company that offers a range of specialist products and services for ground support equipment, respiratory protection and engineering design consultancy. The company has an impressive client roster that includes Virgin Atlantic Airways, Virgin Trains, Delta, Air Canada, and Eurostar.

The investment is a part of Semmco's ambitious plans for growth as the company prepares for the opening its first US office this year, following the opening of its maintenance and assembly facility in Dubai in January 2017.

This year also marks an exciting milestone for Semmco as the company celebrates 25 years in business. Stuart McOnie, managing director at Semmco says: "It's been an extremely exciting start to 2018 for the company and this expansion in to two units at Goldsworth Park only marks the beginning of what's to come for the rest of year. This year we are focusing our efforts at trade events, speaking directly with customers to identify new trends and understand how we can better enhance our customer support. So far, it's been a great success delivering many new opportunities.

"Looking to the rest of the year, we will be opening our first office in America and launching new solutions at a London exhibition in celebration of our 25 years in business and innovation!"

About Semmmco:

Semmmco is an innovative British engineering company that designs, manufactures, installs and services a wide range of ground support equipment and aviation access platforms for its global network of aviation clients.

Since 1993, Semmmco has led the way in providing innovative designs and intelligently engineered maintenance equipment for the aviation and rail industries alongside respiratory safety equipment for teams working in high-risk environments.

Through close working relationships with its clients, Semmmco has designed and developed an extensive range of high quality equipment that meets the needs of teams on the ground and conforms to worldwide safety standards. Products are built to last and enable maintenance, service and inspection work to be carried out safely across the range of aircraft in operation today.

Manufactured from quality materials, and designed with the user in mind, the products feature innovative developments that make complex tasks easier to carry out during maintenance work therefore keeping the engineer safe whilst preventing potential damage to the aircraft.

Semmmco's range of modular platforms can be used across multiple aircraft, ultimately saving time and money for its customers. The entire range of ground support equipment is easy to operate and locate, limiting manual handling and improving efficiency. Alongside the standard products, Semmmco offers a consultation and intelligent design process, for its customers to achieve bespoke solutions for each airline.

The extensive range of products includes:

- Ground Support Equipment
 - Nitrogen and oxygen charging trolleys
 - Wheel and brake changers
 - Portable nitrogen charging kit
 - Jacks
- Aviation Access Platforms
 - Variable height steps
 - UCAS (under cowl access steps)
 - Crown skin and APU access
 - Docking solutions

Our after sales service includes maintenance and repairs as required. Alternatively customers can opt to sign up to our annual service contracts. Lease/Hiring and Total Care Package options for equipment are available on request.
